PROFESSIONAL SUMMARY

Full-stack developer, AI marketing specialist, and operations manager. Shipped 24+ production websites for international clients and built 4 complete systems end to end. Currently operates an AI-powered content engine producing 35 published short-form videos per week, and builds automation systems — MCP servers, AI agents, auto-posting and auto-upload pipelines, and Google Drive organization sweeps — that remove manual work from business operations.

PROFESSIONAL EXPERIENCE

AI Marketing Specialist & Operations Manager — US Health & Wellness Brand (Remote) 2026 – Present

- Design and operate an end-to-end AI influencer video production pipeline delivering 35 published short-form videos per week across a roster of 8 fictional AI personas with locked visual identities, voices, and conversion triggers.
- Built a 275+ script bank and authored a 13-module production knowledge base covering hook engineering, prop continuity, and QA standards.
- Ran a 40-video competitor teardown program to reverse-engineer viral hook mechanics; designed comment-to-DM conversion funnels for every persona.
- Automated publishing, uploads, and Google Drive file organization; manage the full weekly cadence from storyboarding and generation through QA and editor handoff.

Freelance Software & Web Developer — Self-employed 2023 – Present

- Designed, built, and deployed 24+ production websites for clients in the UK and Australia — trades, clinics, training providers, and agencies — many on custom domains, using Next.js and Vercel.
- Delivered projects end to end: discovery, design, development, SEO foundation, deployment, and post-launch improvements, earning repeat engagements and referrals.
- Built custom software integrating databases, reporting systems, and API-driven functionality for improved automation and operational visibility.
- Developed automation tooling for daily operations: MCP servers connecting AI agents to real tools and data, trained task-specific AI agents, packaged reusable AI skills, and Python workflow scripts.

Full Stack Developer / Process Automation Support — Activerse Inc PH 2025

- Designed and developed scalable digital systems that improved internal workflow efficiency and reduced repetitive manual operations.
- Built front-end and back-end integrations connecting application interfaces with structured databases and automated reporting systems.
- Leveraged AI-assisted development tools (Claude, OpenAI assistants, Cursor) to accelerate coding, debugging, testing, and documentation.
- Collaborated remotely across teams to translate business requirements into working software delivered on schedule.

UI/UX Frontend Developer — Motodisk.com 2025

- Developed scalable front-end interfaces using modern component-based design principles.
- Translated functional requirements into responsive, user-friendly application interfaces and improved platform consistency.

Technical Support — Activerse Inc PH 2025

- Diagnosed and resolved software and system issues affecting workflow continuity; contributed software-driven improvements that increased system efficiency.

PROJECTS

Online Case Filing System — Vue.js, Python, D3.js Capstone

- Cross-platform case filing and management system; recognized as a top-performing team project at a research festival, then deployed for a real client including on-site user training in Quezon City.

Daily Time Record System — React, Node.js, MongoDB

- Employee attendance and work-hour tracking with real-time logging and automated time computation for payroll reporting.

Restaurant Management System — React Native, Firebase, Redux

- Cross-platform system managing orders, inventory, and billing for day-to-day restaurant operations.

House & Room Rent Finder — Mobile, JavaScript

- Mobile application with real-time rental listings and location-based search connecting renters and landlords.

TECHNICAL SKILLS

Languages & Backend: Python, JavaScript / TypeScript, C#, SQL / MySQL, REST API integration, database design and query optimization, authentication and authorization

Frontend: React, Next.js, React Native, HTML5, CSS3, responsive UI, component-based architecture

Cloud & DevOps: Firebase, Supabase, Vercel, cloud-hosted databases, serverless concepts, Git / GitHub, CI/CD

AI & Automation: Claude, OpenAI / GPT, Cursor, MCP (Model Context Protocol) servers, AI agent training, custom AI skills, prompt engineering, Google Flow / Veo generative video, auto-posting and auto-upload pipelines, Google Drive automation, Python automation scripting

Tools: Visual Studio Code, GitHub, Figma, Microsoft Excel, CapCut

EDUCATION

Saint Columban College — Bachelor of Science in Information Technology

Holy Child's Academy — Information and Communication Technology (ICT)

ADDITIONAL INFORMATION

- Strong adaptability to new automation platforms, AI systems, and workflow tools.
- Experienced in translating technical requirements into efficient operational solutions.
- Skilled in documentation, structured reporting, and process improvement; works independently across multiple initiatives with minimal supervision.
